Planned tasks:
- Choosing the model
- Getting the model to work with generated dataset
    - scikit-learn -> train_test_split   - apply to generated dataset

- Try to get data using python+API
    - Alternative: https://www.openstreetmap.org/
- If not - prepare the way of manual data gathering from Google Maps (or other system)
- Goal: 75 cases (for training) + 25 cases (for tests)

Completed tasks:
- Literature overview
- Choose a good city (Seattle, WA)
- Generated dataset

Project goals:
- Multi-way transport optimization: car, e-bike, bus
